COURSE OVERVIEW:

The Certified Cost Professional (CCP) Certification 4 Day Course provides comprehensive expertise for professionals who directly influence financial strategies, cost control mechanisms, and value optimization in engineering and industrial operations. This advanced program empowers participants to master corporate cost management principles, cost engineering frameworks, and cost-driven decision-making that align with organizational profitability goals.

The curriculum integrates models based on international cost engineering standards, project economics, and data-driven cost performance analytics that enhance strategic competitiveness. Participants acquire in-depth knowledge that enables them to interpret financial indicators, forecast cost patterns, mitigate cost risks, and deliver measurable outcomes to stakeholders across enterprise environments.

The training emphasizes real-world application, performance optimization, contract and claims management, and business-aligned cost planning using industry methodologies and analytic tools recognized by top global companies. Participants will gain the competency required to lead cost control functions with authority, manage capital expenditure portfolios efficiently, and increase cost transparency across operational domains. The program also targets the complete preparation for the globally recognized AACE International CCP certification exam to validate participants' mastery of cost engineering as a profession.

LEARNING OBJECTIVE:

1. Employ cost engineering methodologies to strengthen financial governance in engineering and industrial operations.
2. Calculate the feasibility of an investment using various engineering economics tools and techniques.
3. Conduct advanced cost estimation, forecasting, and control aligned with corporate financial targets.
4. Integrate cost, schedule, and risk functions to improve project delivery performance.
5. Apply international best practices for procurement, contract management, and claims avoidance.
6. Translate cost variances into strategic actions to mitigate overruns and maximize organizational value.
